

## 24hrs 7 days a week

Planned management of emergency preparedness for incidents :

- Onsite risk analysis to identify reasonable and worst case potential accidents followed by design of preparedness requirements.
- Identify gaps in information and planning such as mapping, currents and weather, and obtain recent data sets from appropriate sources to increase usefulness of preparedness and response tools.
- Use of Industry standard and Real time tele-medical monitoring.
- Inclusion of emergency preparedness in the design of operations and in the environmental, health and safety programs.
- Disease Containment & Control
- Protection of emergency response personnel and affected population.
- Effective communications through the use of appropriate International systems.
- Emergency Medical training of response personnel.
- Advising the corporate companies for coordination during an emergency.
- Assisting in an emergency and coordinating with other agencies and organizations that maybe involved in responding to an emergency.
- Advocate emergency preparedness, exercise and drills.
